

Department of Animal Production and Health, Eastern Province

Project Scope & System Architecture Summary

1. System User Roles

The system architecture enforces a strict hierarchy consisting of 11 primary signing roles, alongside specialized administrative access. These roles define module visibility and data entry permissions across the province.

- Provincial Director
- Additional Provincial Director
- Deputy Director Headquarters 1
- Deputy Director Headquarters 2 (Planning Director)
- Administration Branch
- Accounts Branch
- Deputy Director Districts (Ampara, Batticaloa, Trincomalee)
- Range Veterinary Surgeons (45 range officers)
- OIC Training Centers
- Regional Farms

2. Global Office Details (Universal Modules)

Following Functions apply for all the user roles

- **Human Resources & Personnel:** Manages employee registries, temporary attachments, and inter-unit transfer workflows. Includes maker-checker approval processes routed through the Admin Branch.
- **Land & Building Registry:** Captures site-specific property identification, strictly categorizing facility inventories into 'Offices' and 'Quarters' without relying on automated defaults.
- **Inventory Management (Furniture, Machinery, Instruments):** Maintains a strict, quantity-based audit trail. Automatically calculates current availability against an initial fiscal year baseline. All additions require Issue and Receipt Order numbers to track batches. Removals are tightly governed by formal Board of Survey procedures (Destroyed/Repaired/Sold) rather than direct deletion.
- **Vehicle & Fuel Operations:** Integrates dynamic vehicle type entry with comprehensive monthly running charts. Tracks daily mileage, routing, driver details, and fuel consumption metrics for full operational visibility.

- **Counterfoil Books:** Tracks the lifecycle of official printed registries (e.g., AI Registers, Cash Receipt Books, Disease Outbreak Registers). Records specific serial number ranges from the date of issue to the date of return to the Treasury or issuing branch.

3. Range Details Modules (Unit-Specific Functionality)

Unlike the universal Office Details, Range Details modules represent specialized operational functions assigned dynamically to users based on their specific unit. These assignments can be rotated or updated yearly as operational demands shift.

- Range Statistics - Done
- Annual Targets - Done
- Monthly/Annual Reports - Done
- Regulatory Functions
- Animal Health
- Clinical Services
- Animal Breeding
- Livestock Production
- Dairy Hub
- Projects
- Monitoring
- Accounts
- Clean Sri Lanka
- Trainings

4. Specialized User Scopes & Administrative Oversight

Certain user roles contain unique architectural privileges tailored for high-level oversight and system integrity:

- **Provincial Director Dashboard/Additional Provincial Director:**
 - Read-only dashboard modules.
 - Give approval on some functions
- **Subject Matter Specialist**
 - Diary/Advance Programmes Management.
 - Immunization
 - Mobile Clinics
 - Drug Maintenance
 - Outbreak Report
 - Disease Control
- **District Deputy Director (H/Q1)**
 - Read-only dashboard modules.
 - Give approval on some functions

- **District Deputy Director (H/Q2)**
 - Read-only dashboard modules.
 - Give approval on some functions
- **Admins Branch**
 - Manage the Employees HR functions.
- **Accounts Branch**
 - H accounts
 - Finance Management
 - Crop returns
- **Training Centers**
 - Advance Programmes
 - Produce Register
- **Regional Farms**
 - Parent Stock Operations
 - Hatchery Register
 - Chick Details
 - Feed Management
 - Sales of Eggs
 - Drugs Details
 - Production Details
 - Fuel Register
 - Cattle, White Cattle, Buffalo, Goat
 - Goat

This includes the summaries of the user roles , For some user roles inside this major functions there are sub functions as well
